

APPENDIX B : POINTS CALCULATION DURING A TOURNAMENT

Excel formulary for tournaments (file available under the Events menu)

The Excel file allows automatic calculation of the results of the games.

Basic principle

The point system favors the players who inflict losses to their opponent. A player with 2 draws with few losses inflicted to his opponents will score fewer points than a player with a victory and a defeat.

Victory :

100 points – 1 point for every 5% (rounded down) of suffered loss.

i.e. between 81 and 100 points.

Defeat :

10 points + 1 point for every 5% (rounded down) of loss inflicted to the opponent.

i.e. between 10 and 29 points.

Draw :

Each player's score 40 + 2 points for every 10% (rounded down) of loss inflicted to the opponent – 1 point for every 10% (rounded down) of suffered loss.

i.e. between 31 and 58 points.

Double demoralization :

Each player score 58 points.

Tournament final result

A player's final score is the sum of the points of all his games, calculated as per above.
